

Active surveillance in young prostate cancer patients : From the PRIAS-JAPAN study

INTRODUCTION AND OBJECTIVES

Japan is participating in the Prostate cancer Research International: Active Surveillance (PRIAS) study as PRIAS-JAPAN since 2010.
We assessed the state of younger AS patients from the analysis Japanese cohort(PRIAS-JAPAN)

PATIENTS AND METHODS

The inclusion criteria for the PRIAS study										
Clinical stage T1c/T2										
PSA $\leq 10 \text{ ng/ml}$,										
PSA density $< 0.2 \text{ ng/ml}$										
Positive biopsy cores one or two cores										
Gleason score ≤ 6										

The follow-up protocol for the PRIAS study											
Year	1	2	3	4	5	6	7	8	9	10	11
Month	0	3	6	9	12	15	18	21	24	30	36
PSA	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
DRE	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓	✓
PBx	✓			✓					✓		✓

Pathological reclassification is defined as the deviation of pathological findings on re-biopsy from the inclusion criteria.

Patients are recommended active treatment if the PSA doubling time (PSADT) is <3 years (until December 2014) or if reclassification is confirmed on re-biopsy. Since 2015, PSADT has become a trigger for extra yearly re-biopsy, and patients are not recommended active treatment because of short PSADT (<3 years).

In this analysis, we defined re-biopsy at 1-year as 1st re-biopsy and at 4-year biopsy including extra biopsy as 2nd re-biopsy. We compared the clinical outcome and pathological result of re-biopsy between the group of less than 60 years old (young group) and the groups of over 60 years old or more (aged group).

RESULTS

Until September 2017, 768 patients were enrolled from 37 institutions.

In this population, 96 were in young group at enrollment

Table 1. Baseline characteristics of the study population

	Young group (n=96)	Aged group (n=671)	p value
Age (median)	45~59 (56)	60~87 (69)	
PSA (ng/ml) (median)	0.9~9.75 (4.9)	0.75~9.93 (5.3)	0.01*
PSA density (ng/ml) (median)	0.03~0.19 (0.16)	0.019~0.199 (0.14)	0.054*
Prostate volume (ml) (median)	19.8~67.7 (33.0)	13.6~80.5 (38.75)	<0.001*
T classification	T1c 92 T2 4	602 69	0.06**
Number of biopsy cores (median)	8~22 (12)	10~42 (12)	0.81*
Cancer positive cores	1 core 73 2 cores 23	494 177	0.7***
Cancer detecting rate (positive cores/total cores) (median)	0.04~0.2 (0.08)	0.02~1.0 (0.08)	0.52*
GS	2+3 3+2 3+3 3+4 4+3 1 5 95 652 8 1	4 5 652 1	

*Unpaired T test **Fisher's exact test ***Chi-squared test

Table3. The details of the following therapy

	Young group (n=24)	Aged group (n=192)
prostatectomy	54%	36%
Radiation therapy	EBRT LDR heavy particles irradiation	21% 16% 0.5%
Hormone therapy	LH-RH AA orchietomy	4% 1.5% 0.5%
watchful waiting	4%	11%
unknown		3%

CONCLUSINS

There is a not significant difference between both group in AS remaining rate.

Younger patients tend to avoid re-biopsy but to choose surgery as a definitive therapy.

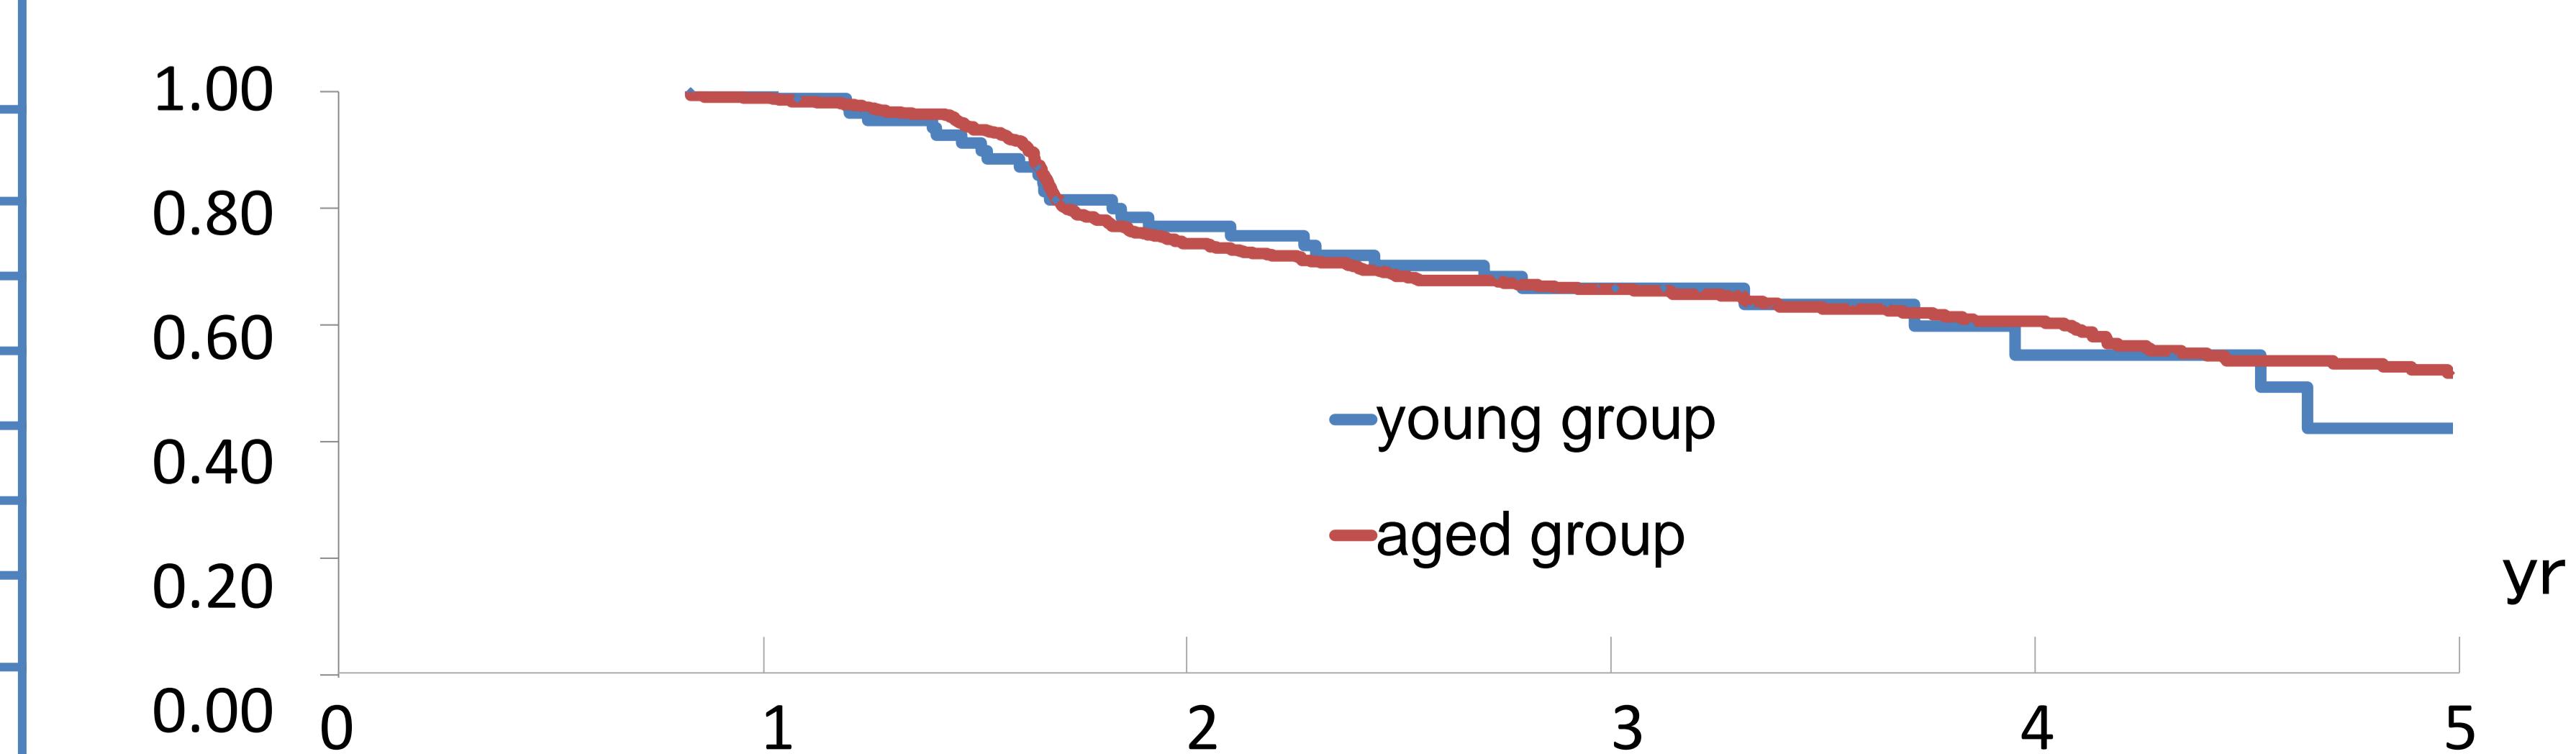

COI: nothing to disclose

Table2. Results of 1st and 2nd repeat biopsy

	1 st repeat biopsy		2 nd repeat biopsy			
	Young group (n=49)	Aged group (n=447)	P value	Young group (n=10)	Aged group (n=93)	P value
